

# Embedded software solutions

STM32, STM8

# A full portfolio and several models

2

- Extensive software ecosystem around the STM32 and STM8
- You will find your solution, fitting your requirements in terms of price, license and support

## ST-designed software

- Built in-house, making the most of the STM32 and STM8
- Source code or binaries
- Supported by ST

## Open source

- Proposed by community or partners
- Source code, from BSD or GPL licenses to commercial products
- Supported by open source community or partners

## Partners

- Generic solutions proposed by many companies, portable to/from other platforms
- Source code or binaries
- Supported by partners

# A large community of partners

3

# Solutions at all levels 4

## Application fields

Hardware abstraction layer (HAL)

Select the area of interest for more details

# Hardware dependent layer (HAL)

# Hardware dependent layer

6

This layer is the first one to interact with the MCU hardware

- **Consistent programming interface**
  - When microcontrollers have different hardware implementations
- **Full microcontroller coverage**
  - All peripherals are handled

# STM32 – Hardware dependent layer

7

Provider	Solution name	Model	Cost	Availability							
				F0	F1	F2	F3		F4	L1	W
							F30x	F37x			
ST	Standard peripheral library and CMSIS DSP library <sup>4</sup>	Source	Free	<u>Y</u>	<u>Y</u>	<u>Y</u>	<u>Y</u>	<u>Y</u>	<u>Y</u>	<u>Y</u>	<u>Y</u>

ST	<a href="#">Class B guidelines</a>	Source	Free	Y	Y	Y		N <sup>1</sup>

1/ Can be ported.

# Focus – ST standard peripheral library

9

Hardware abstraction layer fully covering the STM32 or STM8

- **Compliant with standards**

- ANSI-C source code
- Misra and ST coding rules
- ARM-CMSIS compliant for STM32

- **A real help for developers**

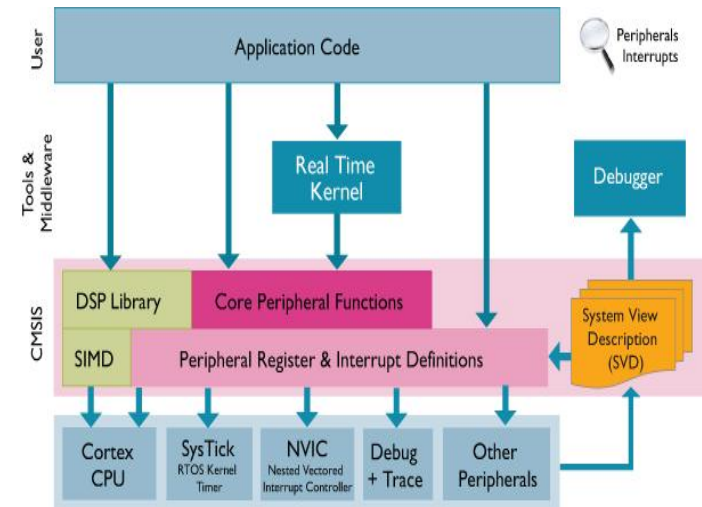

- Comes with a multitude of examples demonstrating usage

# Focus – CMSIS DSP library

10

- **ARM CMSIS DSP library**

- Complete set of DSP algorithms, with examples
  - Math
  - Vectors
  - Statistics
  - Filters (FIR, IIR, ...)
  - Interpolation
  - Matrix
  - Transform (FFT, ...)
- Optimized for Cortex-M4 core, on integer and floating-point values

# Middleware (USB, Ethernet, ...)

Middleware stacks fill the gap between hardware and your application. ST and ST's partners bring the required solutions.

- **All standard middleware covered**

- RTOS/kernel
- File system
- USB
- TCP/IP
- Bluetooth
- ZigBee
- ...

# Middleware – RTOS/kernel

13

This is the root component to share time between several tasks on a single core. It ensures task switch within a known and limited duration.

- **A multitude of solutions for the STM32 and STM8 available now**
  - New contributions are being added regularly

# STM32 – RTOS / kernel (1/2)

14

A file system is the way in which files are named and how they are placed logically for storage and retrieval. Several standards exist, such as FAT and JFFS2

- **Some safety solutions**

- Ensuring data is not corrupted in any way (power supply removal, ...)

- **Some NAND memory access solutions**

- With error correction and wear-leveling

# Middleware – USB

21

Universal Serial Bus requires a dedicated software stack. This serial bus is organized in a star topology with host and device roles, host organizing the traffic. Several device classes are specified, in order to ease communication in different application cases.

- **ST provides a complete offer for STM32**

## Often seen acronyms

OTG	On-The-Go: An OTG peripheral can switch host and device role on the fly
HUB	Defines what protocols to implement to build a hub application
MS	Mass storage: Protocols to interact with storage block devices (for files)
HID	Human interface device: Protocols for peripherals interacting with human body (mouse, keyboard, etc.)
CDC	Communication device class: Protocols for serial communications, different sub-classes define details, for instance ACM for a standard COM port, or ECM for modems
Printer	Defines what protocols to implement to build a printer application
Audio	Defines what protocols to implement to build an audio application (microphone, headset, etc.)
DFU	Device firmware upgrade: Protocols to implement firmware upgrade ability

Thesycon	<a href="#"><u>Embedded USB Device</u></a>	Device: HID, MS, CDC (ACM, ECM, NCM)

# Middleware – TCP/IP (1/2)

26

TCP and IP were developed by a US Department of Defense research project to connect a number of different networks designed by different vendors into a network of networks (the Internet).

It was initially successful because it delivered a few basic services that everyone needs (file transfer, electronic mail, remote logon) across a very large number of client and server systems, and is now widely deployed.

# Middleware – TCP/IP (2/2)

27

## Often seen acronyms

ARP	Address resolution protocol: Provides physical address from IP address
IP	Internet protocol: Primary protocol in Internet Protocol Suite. 2 flavors: IPv4 and IPv6. IPv4 will disappear as it only supports up to $2^{32}$ addresses, not enough for future needs, while IPv6 supports $2^{128}$
6LoWPAN	IPv6 over low power wireless personal area networks: Provides IPv6 connectivity to low rate wireless networks
IPSec	Internet protocol security: Secured version of IP, using cryptography
TCP	Transmission control protocol: Provides reliable, ordered delivery of a stream of bytes
UDP	User datagram protocol: Provides unreliable service. Datagrams may arrive in any order, duplicated, or may be missing. Used for time-sensitive applications, when data drop is better than delay
DHCP	Dynamic host configuration protocol: Provides means to allocate IP address dynamically
DNS	Domain name system: Translates domain names meaningful to humans into numerical IP ones
FTP	File transfer protocol: Provides means to copy files from one host to another
TFTP	Trivial file transfer protocol: Similar to FTP, but based on UDP, and simpler (for example, no directory)
SMTP	Simple mail transfer protocol: Used to send e-mail to a server
POP	Post office protocol: Used to retrieve e-mail from a server
HTTP	Hypertext transfer protocol: Used by web browsers
SSL/TLS	Transport layer security: Secured container for application protocols using cryptography. Example: HTTPS means HTTP over SSL, FTPS, etc.. IPSec applies cryptography at a lower level than SSL/TLS, making it more universal. However SSL is widely used.
Wi-Fi	Wi-Fi is an implementation of the IEEE 802.11 radio communication specification. It is usually used with a TCP/IP stack, so all TCP/IP bricks can be reused on Wi-Fi, adapting the lowest firmware layer.

# Middleware – Bluetooth

32

Bluetooth is a wireless communication technology for exchanging data over short distances, typically used in the mobile world between phones and accessories.

- **Solutions with STM32 + Bluetooth transceiver**
  - Several solutions are available, using STM32 with ST's [STA2500D](#) or ST-Ericsson's [STLC2690](#) or other components

## Often seen acronyms

Often seen acronyms	
HCI	Host/controller interface: Standardized communication between controller and radio chips
SPP	Serial port profile: Profile that emulates serial line over Bluetooth
A2DP	Advanced audio distribution profile: Profile to stream high quality audio
HSP	Headset profile: Profile to implement a basic headset application
HDP	Health device profile: Profile designed to facilitate transmission and reception of medical data
HFP	Hands-free profile: Typical profile used in cars for hands-free phone usage. Implements more features than HSP, such as voice dialing or last number redial

SEARAN	<a href="#"><u>dotStack</u></a>	BT2.1+EDR, BT4.0 Supported profiles: SPP, HID, FTP, HSP, HFP, A2DP, AVRCP, PBAP, iAP, GATT, demo apps on iOS and Android

With short messages, ZigBee offers green wireless standards to connect a wide range of devices so they work together intelligently and help you control your world.

- **Full coverage of STM32W built-in Radio**
  - STM32W family embeds an IEEE 802.15.4 2.4 GHz compliant radio supporting ZigBee and proprietary protocols

## Often seen acronyms

ZigBee RF4CE	Wireless protocol stack for low data rate, low power optimized for consumer electronics. Applications include remote control, mice, keyboards, 3D goggles.
ZigBee PRO	Wireless protocol stack for low data rate, low-power applications using mesh routing. Supports home automation, building automation and smart energy 1.x applications.
ZigBee IP	Wireless protocol based on IPv6/6LowPan targeting next generation smart energy/smart grid applications.
ZRC	Remote control application profile supported by ZigBee RF4CE for consumer electronics.
ZID	ZigBee human interface device application profile supported by ZigBee RF4CE for mice, keyboards, etc.
ZHA	Home automation application profile supported by ZigBee PRO protocol stack.
ZSE	ZigBee smart energy application profile supported by ZigBee PRO and ZigBee IP protocol stacks.

# Middleware – Display

37

ST's MCUs can drive displays through serial or parallel interfaces.

- **Getting the most from hardware and software**

- ST has built a close relationship with partners providing software solutions based on our microcontrollers. Customers can make the most of their hardware.

## Often seen acronyms

Anti aliasing	Technique to minimize distortion artifacts known as aliasing when presenting a high-resolution image at a lower resolution. Aliased images show some stair effects on curves. Anti-aliasing removes this by modifying edge pixel colors.
Alpha blending	Alpha blending is the process of combining a translucent foreground color with a background color, thereby producing a new blended color.
GUI	Graphical user interface
bpp	Bits per pixel (also known as color depth: Number of bits used to represent the color of a single pixel in an image. 1 bpp corresponds to monochrome images.
Palette	Technique to lower image memory size by storing the set of colors used in a table and using this table for each pixel
JPEG	Commonly used method of lossy compression for digital image. The degree of compression can be adjusted, allowing a trade-off between storage size and image quality. JPEG typically achieves 10:1 compression with little perceptible loss in image quality.
RGB	Color model in which red, green and blue are merged to reproduce a broad array of colors.
Widgets	Element of a graphical user interface that can be changed by the user (such as text box, radio button)

# Middleware – Touch sensing

39

Capacitive touch sensing is an electrical cost-efficient technology, replacing conventional mechanical switches to detect user actions, to build modern GUI look and feel.

- **NRE/royalty-free C source code**

- Complete solution for touch keys, linear and rotary touch sensors, with acquisition, post processing and API layers, debounce filtering and calibration functions

## Often seen acronyms

Surface capacitance	The capacitance of a single ended electrode is modified when the finger gets close to it.
Projected capacitance	The capacitance between two sensing electrodes is modified when the finger gets close to them.
RC acquisition	Resistor-capacitor acquisition for surface capacitance only. It consists in measuring the charge and discharge time duration of a RC cell made of the electrode capacitance and a load resistor.
CT acquisition	Charge transfer acquisition for surface capacitance only. It consists in measuring the duration for charging the electrode capacitance and transferring part of the accumulated charge into a sampling capacitor. The CT acquisition is more robust than the RC one.
ProxSense™ acquisition	Charge transfer acquisition for projected capacitance. This acquisition offers enhanced features such as integrated sampling capacitor, automatic electrode tuning, electrode parasitic capacitance compensation, ... The ProxSense acquisition is more robust than the CT one.

Application fields (audio, motor,...)

- **A complete solution for all audio aspects**

- All audio aspects can be covered by solutions from ST or partners or STM32

- **Optimized for ST products**

- Unlike open-source non-optimized solutions, ST works with partners to propose optimized algorithms for ST platforms

## Often seen acronyms

Codec	A codec is a program capable of encoding and decoding a digital data stream. The encoded stream can be compressed or not, with a lossy (MP3, WMA, ...) or lossless (FLAC, ALAC, ...) mechanism.
PCM	Pulse-code modulation: Digital representation of an analog signal, in which the magnitude of the analogue signal is sampled regularly, each sample being quantized to the nearest value within a range of digital steps.
AAC, MP3, WMA	Music codecs with patents. Royalties need to be paid to patent owners.
Vorbis	Open source, no royalties music codec
Speex	Open source, no royalties speech codec
G711	Simple codec with no royalties often used in telephony
G726	ADPCM (adaptive differential pulse code modulation): Simple compression of PCM data

2/ Only available by request to local sales for companies being a licensee of Apple MFi (Made for iPod) program.

3/ Available on demand. Ask your local ST Sales office.

# Focus – STM32 Audio Engine MP3

45

- **De facto standards support**

- Support for popular MP3 and WMA key formats, AAC coming

- **More than just a codec**

- Comes with must-have add-ons such as
  - Channel mixer utility (for volume and mute control)
  - Standalone 5-band parametric equalizer utility
  - Loudness control utility
- Part of global “Audio Engine” initiative, gathering many Audio algorithms under a consistent umbrella

- **Beyond open-source standard approach**

- Optimized for Cortex-M3 and Cortex-M4

Firmware brick	STM32F2 MIPS	STM32F4 MIPS	Flash in bytes		RAM in bytes
			Code	Const	
MP3 decoder	21	10	15508	7108	12344

# Application field – Industrial

46

Industrial market needs are very fragmented in terms of communication protocols. Many different protocols are available for different target applications in lighting, automation, metering and others.

- **Benefit from ST's extensive partner network**

- With ST's extensive partner network, our customers can easily find their required industrial protocol solution

Stack	Meaning
EtherCAT, Profinet, Ethernet/IP, Powerlink ...	Industrial Ethernet protocols for factory automation. Ethernet field buses are the latest trend in this application domain.
Profibus PA	Standard for field bus communication in automation technology (PA – process automation). Originally designed for EIA-485 but also available for fiber optics. Profibus is an open standard.
CANopen	Based on CAN physical layer. Industrial Ethernet protocols very often support the CANopen device profiles.
J1939	Standard used for communication and diagnostics with vehicle components (e.g. agricultural machines).
DeviceNet	Based on CAN physical layer. The common industrial protocol (CIP) is an industrial protocol for industrial automation applications. CIP is used in Ethernet/IP and DeviceNet.
Modbus	Originally designed for EIA-485. Modbus TCP is its Ethernet variant.
OPC-UA server	OPC defines communication of real-time process data over Ethernet between industrial equipment from different manufacturers (process instrumentation). All SCADA/HMI products support OPC-UA.
IO-Link	IO-Link is used for the lowest field level communication. It offers an additional and integrated digital data channel down to the smallest sensor and actuator in factory automation.

# Application field – Automotive

54

- **More than hardware**

- In addition to microcontrollers dedicated to automotive equipment, ST proposes a set of firmware solutions

Often seen acronyms	
J1939	Vehicle standard used for communication and diagnostics with vehicle components (e.g. agricultural machines).
J2602	USA variant of LIN
LIN	Local interconnect network: The LIN bus is a small and slow network system that is used as a cheap sub-network of a CAN bus to integrate intelligent sensor devices or actuators in today's cars. The LIN specification is enforced by the LIN-consortium, with the first exploited version being 1.1, released in 1999. Since then, the specification has evolved to version 2.1 to meet current networking needs. Bit rates vary within the range of 1 to 20 Kbit/s.
CAN	Controller-area network (CAN or CAN-bus): This is a standard vehicle bus designed to allow microcontrollers and devices to communicate with each other within a vehicle without a host computer. Possible bit rates from 125 Kbit/s up to 1 Mbit/s.

- Warning: STM32 device is not qualified for automotive, but there are however some existing software solutions.

# Development and execution environments

57

Some new environments modify traditional firmware development. These environments are based on high-level object-oriented languages, coming with their own specific development environments.

- **Easier migration**

- ST and its partners support customers as they migrate to these new environments

**Java**

Environment	Meaning
Java	Java object-oriented language and Eclipse development environment.
.NET	C# object-oriented language and Microsoft Visual Studio development environment. This is Microsoft .NET Micro Framework for microcontrollers.
